Over to Ghost Analytics in London

Prep

Run the clean up commands to

- Remove the results schema
- Drop the agent
- Recreate the schema
- Re apply all the grants

Test prompt: Test you can write to the results, and update the semantic view

Snowflake Marketplace Request

Dear Snowflake Consumer,

The data provider [redacted] has APPROVED your listing request for "GHOSTDATA".

Please log in to Snowflake, navigate to your requests tab, and click “Get” in order to create a database from the data that has been shared with you.

Additionally, you can navigate to the listing page and click the “Get” button there.

Walk through the setup

- Show the data that Tim shared
  - Cant write shared app database so created a view in my own database
- Snow the native app in the marketplace
  - Mention 30 day free trial
- Create the 'PKE Agent'
  - Database schema for read - (view of Tim's shared data)
  - Database schema for results: read / write
- Go to Snowflake Intelligence
  - Select the PKE Agent

Prompt: "What problems can I solve with algorithms"

 Neo4j Inc. All rights reserved 2026

Inspect the schema and create views for graph analytics, use supported data types and make THREAT_LEVEL, VERIFIED and MANIFESTATION_FREQUENCY numeric, don't use SIGHTING_DATE_TIME, need to use undirected graph

We suspect there are acting as gatekeepers causing havoc, find top 5

Betweenness Algorithm

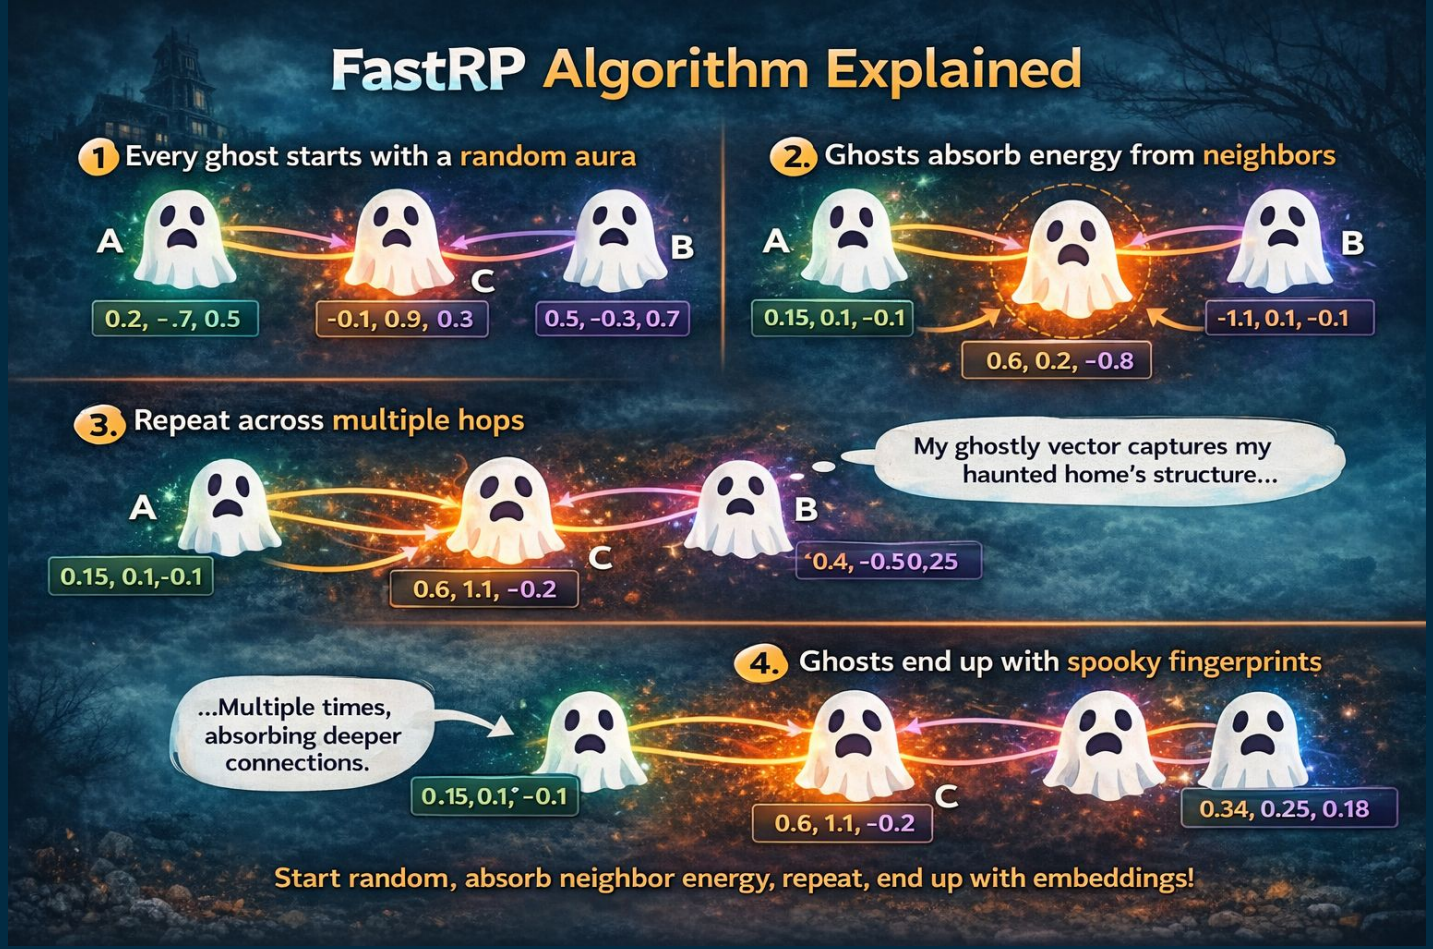
Influence of a specific ghost based on how <u>often</u> it acts as a "bridge" along the shortest paths between other pairs of ghosts.

— Shortest Paths

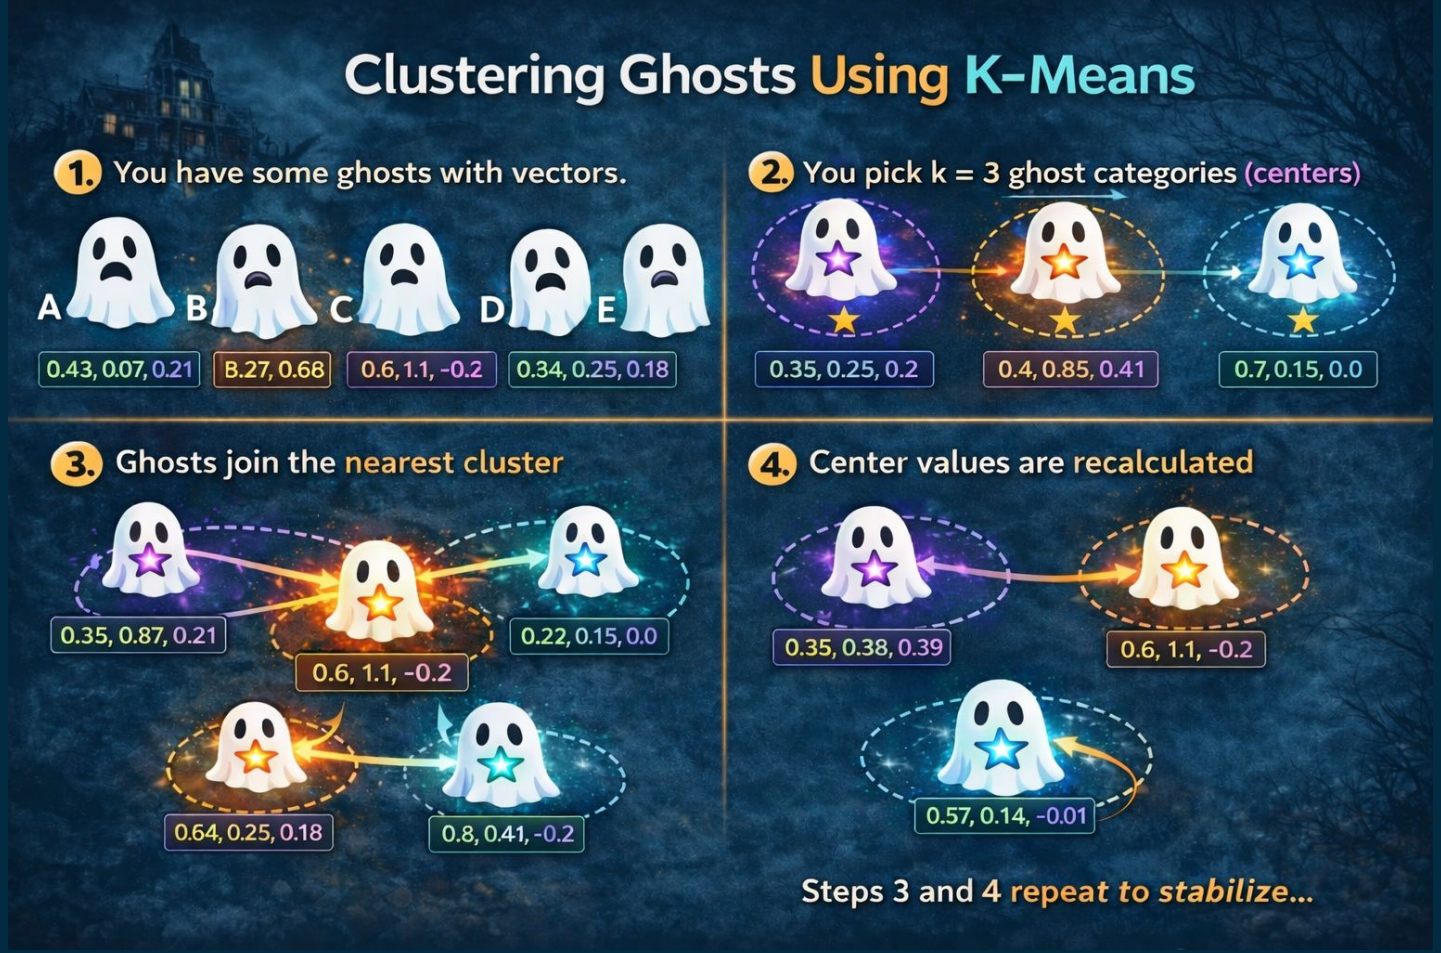
— Alternate Paths

lots of information about ghosts can you encode it quickly so I can categorise the ghosts into 5 types

 Neo4j Inc. All rights reserved 2023



Encodes information about a ghost in the network, is the faster than approaches like Node2Vec makes it suitable for billions of ghosts!



Clusters ghosts using unsupervised machine learning algorithm (unlabeled data) into distinct, non-overlapping subgroups
